PROFESSIONAL SUMMARY

Software Engineer with 5+ years building mobile apps in React Native and web apps in React.js, plus backend work with Python, FastAPI, and GraphQL. I've shipped full-stack features end to end, from UI to database migrations, and I'm comfortable across the whole stack. Most of my recent work has been on a sports card marketplace with live auctions, where I've driven performance, state management, and in-app payments. I architected and shipped secure auth flows (OAuth, MFA, phone verification, onboarding) on Stytn and AWS Cognito; slashing account takeover tickets by 99%, lifting mobile signup completion by 25%, and pushing verified accounts from 83% to 88%

TECHNICAL SKILLS

Languages: TypeScript / JavaScript, Python.

Mobile: React Native (iOS, Android), Swift/Kotlin native modules.

Web: React.js, Material UI, Emotion, Responsive Design, Bootstrap, Tailwind, Shadcn

State & Data: React Query, Redux Toolkit, Context, MobX.

Backend: Python (FastAPI), Node.js (NestJS), GraphQL, REST, SQLAlchemy/Alembic, Prisma.

Databases: MySQL, PostgreSQL, MongoDB, Redis.

Auth & Security: AWS Cognito, Stytn, Multi-Factor Authentication, secure onboarding, session, and token management.

Cloud & Serverless: AWS Lambda, SQS, S3.

Tools: Git, GitHub/Bitbucket, Jira, VS Code, Xcode, Android Studio, Retool, Docker.

PROFESSIONAL EXPERIENCE

Mobile / Software Engineer April 2022 – Present

First Factory | Remote

Cross-functional mobile and full-stack engineer across multiple enterprise client engagements.

Project: Sports Card Marketplace & Live Auction Platform

- Build and maintain cross-platform mobile apps in React Native + TypeScript for multiple enterprise clients, including a sports card marketplace with live auctions and bidding.
- Optimize mobile performance with list virtualization, memoization, render profiling, and image/memory handling, skeletons, loadings, and empty states, keeping things smooth on both high-end and lower-end devices.
- Apply advanced state management and data fetching patterns with Apollo Client, React Query, and Redux Toolkit, and MobX, including caching, invalidation, and optimistic updates to keep data consistent and performant across screens.
- Implement marketplace and auction/bidding experiences, listings, bid states, real-time updates, and error-resilient flows designed to handle high-volume user interactions.
- Design and ship secure auth flows (OAuth, MFA, phone verification, onboarding) using Stytn and AWS Cognito, depending on the client stack.

- Deliver full-stack features end-to-end: GraphQL mutations and queries in Python/FastAPI and NestJS backends, SQLAlchemy/Alembic database migrations, and the corresponding mobile/web UIs.

Project: Accessibility Communication Mobile App

- Bridged native iOS and Android functionality via Swift/Kotlin native modules, covering camera, system permissions, and Bluetooth pairing and connection handling with external audio devices.
- Collaborated with Product, CX, and SMEs to gather requirements, refine PRDs, clarify business rules, and turn product needs into reliable software solutions

Project: Credit Card Payment Web App

- Integrate third-party payment providers (Stripe, Paytrace, and Authorize.NET) into mobile and web experiences to enable seamless, secure in-app transactions.
- Architected and deployed the NestJS backend on AWS Serverless, keeping infrastructure lean and scaling transaction throughput on demand.
- Streamlined financial reporting workflows by developing a scheduled serverless cron job that automates the extraction, formatting, and delivery of transaction logs from Authorize.Net to external client servers.

Frontend Developer March 2021 – February 2022

SOIN | Remote

- Designed and developed reusable React.js components with Emotion and Material UI, accelerating feature delivery across multiple enterprise web applications.
- Contributed end-to-end to a centralized enterprise portal and "Tramite ¡Ya!", a web app streamlining digital procedures and user workflows.
- Authored unit and end-to-end (E2E) tests to strengthen the team's testing culture and reduce regressions, while collaborating with backend, QA, and design.

EDUCATION

Bachelor's in Information Technology for Business 2015 – 2020

Universidad de Costa Rica

CERTIFICATIONS

- Advanced Software Design with Objects I – 10Pines (2020)
- Scrum Fundamentals Certified – SCRUMstudy (2020)

LANGUAGES

Spanish: Native

English: Advanced (C1 – EF SET certified, 2022)
